

Assist Chat

You've got questions? Assist Chat has answers.

Law enforcement personnel are held to an incredibly high standard. In emergency situations, they are expected to know exactly what to do and how to do it. Your agency spends a tremendous amount of time and effort drafting policies and procedures that document the appropriate response and actions — but making those policies accessible grows more challenging as your personnel spend more time in the community and less time in the precinct.

Assist Chat eliminates the need for your personnel to track down the correct policy binder, putting the complete knowledge base of your agency — policies, procedures, user manuals and even incident data (with appropriate permissions) — into a browser-based AI assistant experience.

Safely access popular AI tools

Responders interact with their community every day, in a world that stretches beyond your policies and procedures. With Assist Chat, your personnel can safely and securely get answers to questions your documentation does not cover from a best-in-class Generative AI large language model, with no risk of your internal data being made public. Agency data remains within your controlled environment, giving your personnel the knowledge they need without risking your privacy.

Instant expertise

Type or speak natural language questions about your agency's documentation in a CJIS-compatible, FIPS 140-2 compliant database. Following procedure has never been easier.

Supercharged productivity

Polish and proofread reports, upload content for summarization, draft written responses and review incident data (with appropriate permissions) all in one place, saving valuable time.

Improved compliance

Community and media scrutiny of public safety agencies has never been higher. Make it easier for your teams to perform “by the book” on each and every call with simple and fast policy access.

Tired of typing? Just ask ViQi.

Assist Chat features ViQi, the interactive voice assistant from Motorola Solutions for situations where circumstances or user preference make spoken interactions the preferred mode of communication.

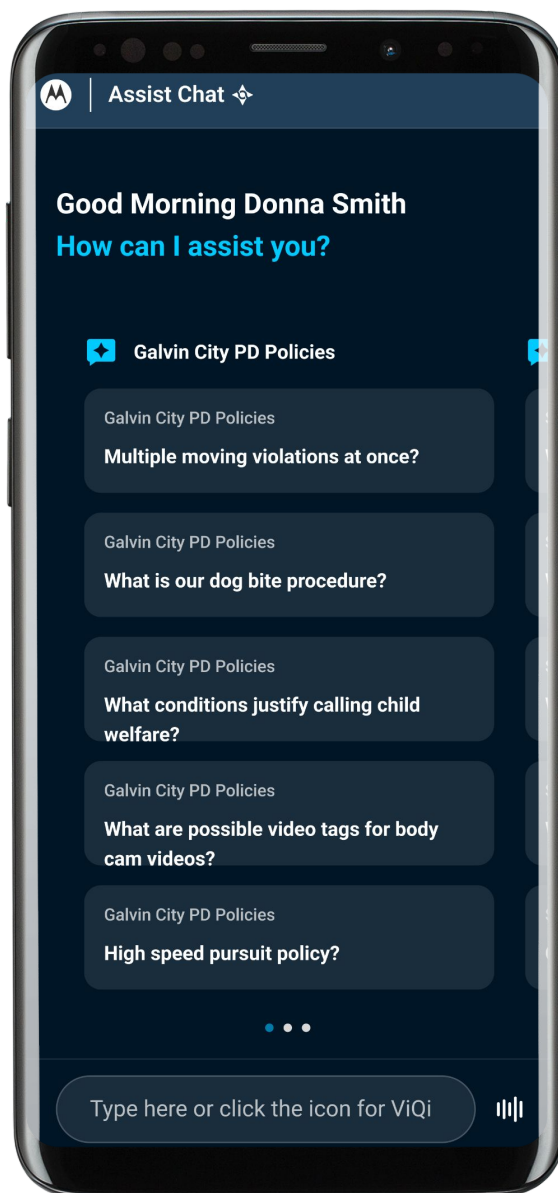

Simply click the voice icon next to the Assist Chat input bar, and ask your questions verbally.

Your ultimate AI sidekick

In public safety and enterprise security, every interaction has real-world impacts to your community. Poorly implemented AI slows users down, and may result in consequential decisions being made with insufficient data and user oversight.

Assist, the interactive AI from Motorola Solutions, is thoughtfully integrated to offer insights drawn from your entire workflow - voice, video and data - right in the application where you need them. There is a world of difference between adding artificial intelligence to a product, and intelligently adding artificial intelligence to a product.

Assist is here to assist.
